

Model A Series Installation Instructions

Please follow these instructions carefully. Failure to follow these instructions can result in a very dangerous situation and possibly void your warranty.

- LAZYMAN Grills are for **OUTDOOR USE ONLY**.
- This barbecue **MUST BE** installed in masonry or cinder block construction! Any wood construction **MUST BE** at least 24" away and **NEVER** locate this barbecue under overhead structures. Failure to follow these instructions can result in a very dangerous situation and possibly void your warranty.
- Before installation, be sure to check the type of fuel - Propane or Natural Gas. Units are set for each specific fuel and are not interchangeable. Units not set for the type of gas being used **WILL NOT WORK** and could cause damage. Propane units require the use of a low pressure regulator.
- Fuel delivery system must be black pipe or copper tubing. Hose **CANNOT** be used through masonry or cinder block construction, nor can a hose be used for the final connection to the barbecue.
- Any gas connection should be made by a **QUALIFIED GAS SERVICE TECHNICIAN!** Always safety check all gas connections before lighting any barbecue. **REMEMBER - GAS BURNS AND SO DO LEAKS!** Safety is up to you.
- Upon completion of installation and safety checks, place lava rocks around burners. Coal support grates are **NOT** used in this type of gas barbecue. Place stainless steel cooking grates on top. Ignition of the gas-fired barbecue is accomplished by lighting a long fireplace match and inserting it through the cooking grate and **ONLY THEN** turning on the gas valve. The second burner will be ignited by the first. This **MUST** be done for each section. If barbecue does not light, wait five (5) minutes for gas to disperse and repeat above instructions.
- Cooking is the same as any gas-fired barbecue. Any sauces should be applied toward the end of cooking to eliminate unwanted flare-ups.
- Cleaning the barbecue should be done with oven cleaner or with a mild abrasive soap. Once a year the burners should be removed and cleaned.
